N'Alternate names: 1,4-alpha-D-glucan glucanohydrolase
C;Species: Bacillus amyloliquefaciens
C;Species: Bacillus amyloliquefaciens
C;Accession: A92389; A90307; Ī39756; I39763; A00843
R;Takkinen, K.; Pettersson, R.F.; Kalkkinen, N.; Palva, I.; Soderlund, H.; Kaariainen, I. Biol. Chem. 258, 1007-1013, 1983
A;Title: Amino acid sequence of alpha-amylase from Bacillus amyloliquefaciens deduced fr A;Reference number: A92389; MUID:83108808; PMID:6185474
                                 A; Molecule type: DNA
A; Residues: 1-29 < LAO>
A; Table: 1. PID: GSIMZ6412; NID: G341477; PIDN: AAA22237.1; PID: GS16590
B; Jordensen, P.L.; Hansen, C.K.; Poulsen, G.B.; Diderichsen, B.
Gene 96, 37-41, 1990
A; Title: In vivo genetic engineering: homologous recombination as a tool for plasmid con A; Reference number: 139772; MUID: 91092499; PMID: 2265757
A; Accession: 139772
A; Status: translated from GB/EMBL/DDBJ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

-!- SUBCELLULAR LOCATION: Extracellular.
-!- TISSUE SPECIFICITY: Hemolymph.
-!- MISCELLANEOUS: THE TWO COPPER IONS BOUND EACH HAVE 3 NITROGEN LIGANDS (PRESUMALLY CONTRIBUTED BY HIS RESIDUES) AND SHARE A BRIDGING LIGAND (POSSIBLY CONTRIBUTED BY A TYR RESIDUE) IN ADDITION TO BINDING OXYGEN.
-!- SIMILARITY: BELONGS TO THE TYROSINASE FAMILY. HEMOCYANIN
Eukaryota, Metazoa; Arthropoda; Chelicerata; Arachnida; Araneae;
Mygalomorphae; Theraphosidae; Aphonopelma.

"Complete sequence of the 24-mer hemocyanin of the tarantula Eurypelma
                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    J. Biol. Chem. 275:39339-39344 (2000).
-!- FUNCTION: HEMOCYANINS ARE COPPER-CONTAINING OXYGEN CARRIERS OCCURRING FREELY DISSOLVED IN THE HEMOLYMPH OF MANY MOLLUSKS AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- SUBLINIT: TARANTULA HEMOCYANIN IS A 24-CHAIN POLYMER WITH SEVEN DIFFERENT CHAINS IDENTIFIED.
-!- SUBCELLULAR LOCATION: Extracellular.
-!- TISSUE SPECIFICITY: Hemolywph.
-!- MISCELLANEOUS: THE TWO COPPER IONS BOUND EACH HAVE 3 NITROGEN LIGANDS (PRESUMABLY CONTRIBUTED BY HIS RESIDUES) AND SHARE A BRIDGING LIGAND (POSSIBLY CONTRIBUTED BY A TYR RESIDUE) IN ADDITION TO BINDING OXYGEN.
-!- SIMILARITY: BELONGS TO THE TYROSINASE FAMILY. HEMOCYANIN

-!- FUNCTION: Cleaves GlonAc linked beta-1,4 to MurnAc tripeptides

-!- FUNCTION: Cleaves GlonAc linked beta-1,4 to MurnAc tripeptides

(By similarity).

-!- CATALYTIC ACTIVITY: Hydrolysis of terminal non-reducing N-
acetyl-D-haxosamine residues in N-acetyl-beta-D-haxosaminides.

-!- PATHWAY: Call wall synthesis; murcin tripeptide recycling pathway.

-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!- SUBCELLULAR: BELONGS TO FAMILY 3 OF GLYCOSYL HYDROLASES. NAGZ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Galisson F.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -1- SIMILARITY: Contains 2 RNA recognition motif (RRM) domains.
-1- SIMILARITY: BELONGS TO THE SR FAMILY OF SPLICING FACTORS.
-1- CAUTION: Ref.2 sequence differs from that shown due to erroneous gene model prediction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -1- SUBCELLULAR LOCATION: Nuclear (Potential).
-1- TISSUE SPECIFICITY: Highly expressed in roots and flowers. A presumably longer alternatively spliced form is found in leaves, stems and flowers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             STRAIN=cv. "Primer-directed sequencing of human papillomavirus types.";

Curr. Top. Microbiol. Immunol. 186:13-31(1994).

-!- FUNCTION: E2 REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.

-!- FUNCTION: E2 REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.

IT BINDS TO THE EXER RESPONSE ELEMENT (5'-ACCINNININGGT-3') PRESENT

IN MULTIPLE COPIES IN THE REGULATORY REGION. IT CAN ETHER ACTIVATE OR REPRESS TRANSCRIPTION DEPENDING OF EZRE'S POSITION WITH REGARDS TO PROXIMAL PROMOTER ELEMENTS. REPRESSION OCCURS

BY STERICALLY HINDERING THE ASSENBLY OF THE TRANSCRIPTION INITIATION COMPLEX. THE E1-E2 COMPLEX BINDS TO THE ORIGIN OF DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
         -1- FUNCTION: REQUIRED FOR CONSTITUTIVE AND ALTERNATIVE PRE-MRNA SPLICING (BY SIMILARITY).
-1- SUBCELLULAR LOCATION: Nuclear (Potential).
-1- TISSUE SPECIFICITY: Highly expressed in roots and flowers. A presumably longer alternatively spliced form is found in leaves.
                                                                                                                                                   -!- SIMILARITY: Contains 2 RNA recognition motif (RRM) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

Title: US-09-870-089B-13 Perfect score: 55 Sequence: 1 KHFKPHGFS 9 Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5 Searched: 127863 segs, 47026705 residues

Total number of hits satisfying chosen parameters: 127863

Minimum DB seq length: 0 Maximum DB seq length: 200000000 Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt_41:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
